Authorized to work in the U.S. on OPT from January 2027, for up to 36 months with the STEM extension

Summary

Data and AI engineer who builds the data layer and the AI on top of it. I spent two years building cloud data warehouses and pipelines on Azure, Databricks, Snowflake, and AWS for US clients, including advertising data and a pipeline moving 10 million records a day that I was on call for. At ASU, I built an AI tool now in production that cut processing time per item by about 80%, and my team won 1st place at the DevHacks hackathon. Databricks Certified Data Engineer Professional.

Skills

Languages: Python | SQL | TypeScript | Java | C++ | Bash | PowerShell
Data Engineering: Databricks | Spark | Delta Lake | dbt | Kafka | Airflow | Snowflake | Redshift | Azure Data Factory
AI: Claude API | AI Agents | RAG | LLM Evaluation | Local LLMs (MLX) | scikit-learn | Forecasting
Cloud & DevOps: Azure | AWS | Terraform | Docker | Kubernetes | GitHub Actions | CI/CD | Linux
Governance & BI: Unity Catalog | Microsoft Purview | Data Lineage | Power BI | Microsoft Fabric

Experience

Arizona State University, Surplus Property **Jun 2026 - Present**
Tech Assistant, Surplus Operations *Phoenix, AZ*

- Staff were retyping laptop specs by hand, so I built Surplus Station in Python and Flask: on-device OCR reads labels, and a 14B model running offline across four Mac minis writes listings. It's in production and cut processing time per item by about 80%.
- Automated bulk auction listings, cutting a 100+ unit pallet from 1 to 2 hours to about 10 minutes, and added merge rules so a bad read can never overwrite good data.

Arizona State University **Aug 2025 - May 2026**
Graduate Teaching Assistant, Network Security & Wireless Networks *Glendale, AZ*

- Wrote a Python toolkit that flags anomalies in 100,000+ network packets. It caught a live denial-of-service attack.

Celebal Technologies Pvt. Ltd. **Sep 2022 - Nov 2024**
Associate, Data Engineering *Jaipur, India*

- Delivered cloud data warehouses and lakehouses on Azure and Databricks for every client project, with Kafka streaming, PySpark, and dbt models with tests.
- Created ad data pipelines with Kafka and Spark for a major fashion e-commerce client, modeling impressions, clicks, conversions, spend, and attribution.
- Was on call for a production AWS pipeline moving about 10M records a day, and cut downtime about 30% by fixing root causes instead of rerunning jobs.
- Built a major US utility's business glossary and lineage in Microsoft Purview over 10 months, and set up Unity Catalog access control for a consumer goods client.
- Led a five-person Microsoft Fabric pilot that got a telehealth client's staff their reports in half the time, presented architectures to client decision-makers, and mentored two interns.

Projects

DevHacks × Cubbie Hackathon, 1st Place (Track 1) | Python, Claude API **Oct 2026**

- Our team won with Cooked, picked by student vote from 82 submissions; it scores a student's week from Canvas data. I also built Receipts, a Discord bot that catches promises in chat, with 493 automated tests in CI.

Label Lens | TypeScript, Next.js, Claude API | label-lens-iota.vercel.app **Live app, 2026**

- Checks food and medicine labels against a user's allergies and medications. Every AI warning must quote the label (44 of 44 verified, 62 tests), and running two models in parallel cut response time from 16 seconds to 4 to 9.

Margin Radar (prototype) | Python, DuckDB, Claude API **Oct 2026**

- An agent that flags a business's margin problems early, where every number in its briefs traces back to a SQL query. I tested it on held-out data and documented where it still fails.

Demand Forecasting & Inventory Optimization | Python, LightGBM, Prophet **MS capstone, 2026**

- Forecast 250 product and warehouse series with a strict time-based split. I caught a leaking column, and the fixed model reached 27.7% error against a 38.5% baseline.

Education

Arizona State University **Expected Dec 2026**
M.S. in Data Science, Analytics, and Engineering | GPA: 3.96/4.0 *Tempe, AZ*

Rajasthan Technical University **2019 - 2023**
B.Tech in Computer Science | GPA: 3.38/4.0 *India*
